EDUCATION DURING THERAPY

Madonna RDP/OP offers access to the Therapeutic Learning Center (TLC). In TLC, a certified teacher works with students on their school assignments and with teachers in the student's school to ensure a smooth transition.

UNPLANNED TRANSFERS TO ACUTE CARE

Last year **0** children and adolescents were unexpectedly admitted back to an acute care hospital while receiving outpatient services.

EXPECTED OUTCOMES

While individual results vary, last year most adolescents and children were able to take care of themselves, communicate and either walk or use a wheelchair independently with age appropriate supervision. Some required adaptive equipment to help them be independent.

INDEPENDENCE LEVEL

Patients admitted into Madonna's pediatric RDP/OP demonstrated progress based on two outcome measurement tools depending on age. Wee Functional Independence Measure (WeeFIM) is used for patients age 0-7 and the Functional Assessment Measure (FAM) is used for patient age 8-18. Activities such as walking, taking care of themselves, communicating and thinking skills are rated on a scale of 1-7 and then totaled. Patients are assessed at time of admission and again at discharge to determine WeeFIM or FAM gains.

WeeFIM (0-7 years old)

Omaha	Average Gain
Outpatients	9.8
Rehab Day Patients	7.0

FAM (8-18 years old)

Omaha	Average Gain
Outpatients	9
Rehab Day Patients	18

ACCREDITATION

Madonna Rehabilitation Hospitals are accredited by CARF, the Commission on Accreditation of Rehabilitation Facilities, as an Outpatient Medical Rehabilitation Program and Pediatric Specialty Program.
